

Breaking the ICE!

Aircraft Icing during flight can be catastrophic! It disrupts the flow of air over the aircraft diminishing the wing's maximum lift and the propeller's thrust. This reduces the angle of attack for maximum lift, which in turn, adversely affects an aircraft's handling characteristics while significantly increasing drag. Don't get caught in this nightmare! By attending this important briefing you will learn the latest strategies for avoiding icing conditions and learn exactly what to do if you experience an inadvertent icing encounter. Please click on the link below for more information and to register on-line for this event!

Directions: Please refer to map link for directions. If inclement weather is forecast, please call (610) 595-1500 extension 240 for possible seminar cancellation message.

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
